

# **Evaluation of Rabies Surveillance Data in Salima District in Malawi from June 2015 to May 2016**

**DR POYA NJOKA (Chief Epidemiologist) MoAIWD**

**3<sup>rd</sup> African Animal Welfare Conference**

**Addis Ababa**

**2 – 4 September, 2019**

# Introduction

- Annually rabies kills 60,000 people globally
- 40% of people bitten by suspect rabid animals are children under 15 years of age
- Asia and Africa have the highest risk of rabies accounting for over 95% of global human mortalities

# Introduction cont'd

- In Mw districts conduct passive surveillance of dog bite cases
- Pet vac as the main control strategy, coverage is less than 40%
- Some resources channelled to PEP-could be better spent in dzz control in pets

# Objectives

- Assess quality of rabies surveillance data (timeliness & completeness)
- Compare dog bites with post exposure prophylactic (PEP) treatment temporal trends
- Assess Salima District's performance in rabies surveillance

# Methods

- A cross-sectional study
- Period and place: June 2015 to May 2016 in Salima, Mw

## **Calculation of timeliness & Completeness**

- 7 EPAs reporting records reviewed at district

# Methods cont'd

- **(i) Timeliness:**

- Timely report = At least 80% of surveillance data sent to district by 10<sup>th</sup> of following month
- Late report = 50 to 79.9% of data by 10<sup>th</sup> of following month
- No report = Below 50% of data by 10<sup>th</sup> of following month

- **% Timeliness**=(timely reports) X 100/expected number of reports

# Methods cont'd

- **(ii) Data completeness:** How many of the expected number of reports were submitted =  $\frac{\text{All submitted reports}}{\text{number of expected reports}} \times 100$
- 2. Comparing dog bite and PEP temporal trends:**
  - Line graphs were used to visualize & compare the trends
- 3. Assessing district performance in rabies surveillance**
  - Performance percentage achieved in each one of the 5 different aspects of surveillance namely (data collection, reporting, analysis & interpretation, action and evaluation) were calculated and bar graphs used to visualize the results

# Results

## 1. Reporting timeliness & Completeness

- Timeliness in the 7 EPAs ranged from 17 to 92%, median 58.33
- Completeness ranges from 58 to 100%, median 100% (table 1)

# Results Cont'd

TABLE 1: REPORTING TIMELINES AND COMPLETENESS FOR SALIMA EPAs FROM JUNE, 2015 TO MAY, 2016

SALIMA DISTRICT EPAs	2015							2016					% TIMELINES CUMMULATIVE YTD	% COMPLETENESS CUMMULATIVE YTD
	JUN	JUL	AUG	SEP	OCT	NOV	DEC	JAN	FEB	MAR	APR	MAY		
Chipoka	T	T	T	T	L	L	T	T	T	NR	T	T	75	91.67
Katelera	T	T	T	T	T	T	T	T	T	L	T	L	83.33	100
Tembwe	T	T	L	T	T	T	L	T	L	T	L	L	58.33	100
Makande	T	NR	NR	NR	T	T	T	T	T	T	L	L	58.33	75
Chinguluwe	T	T	T	T	T	T	T	T	T	T	T	L	91.67	100
Matenje	NR	L	L	L	T	T	NR	NR	NR	L	NR	L	16.67	58.33
Chilwa	T	T	T	T	T	T	T	L	T	T	T	T	91.67	100
SALIMA MEAN												67.86	89.29	

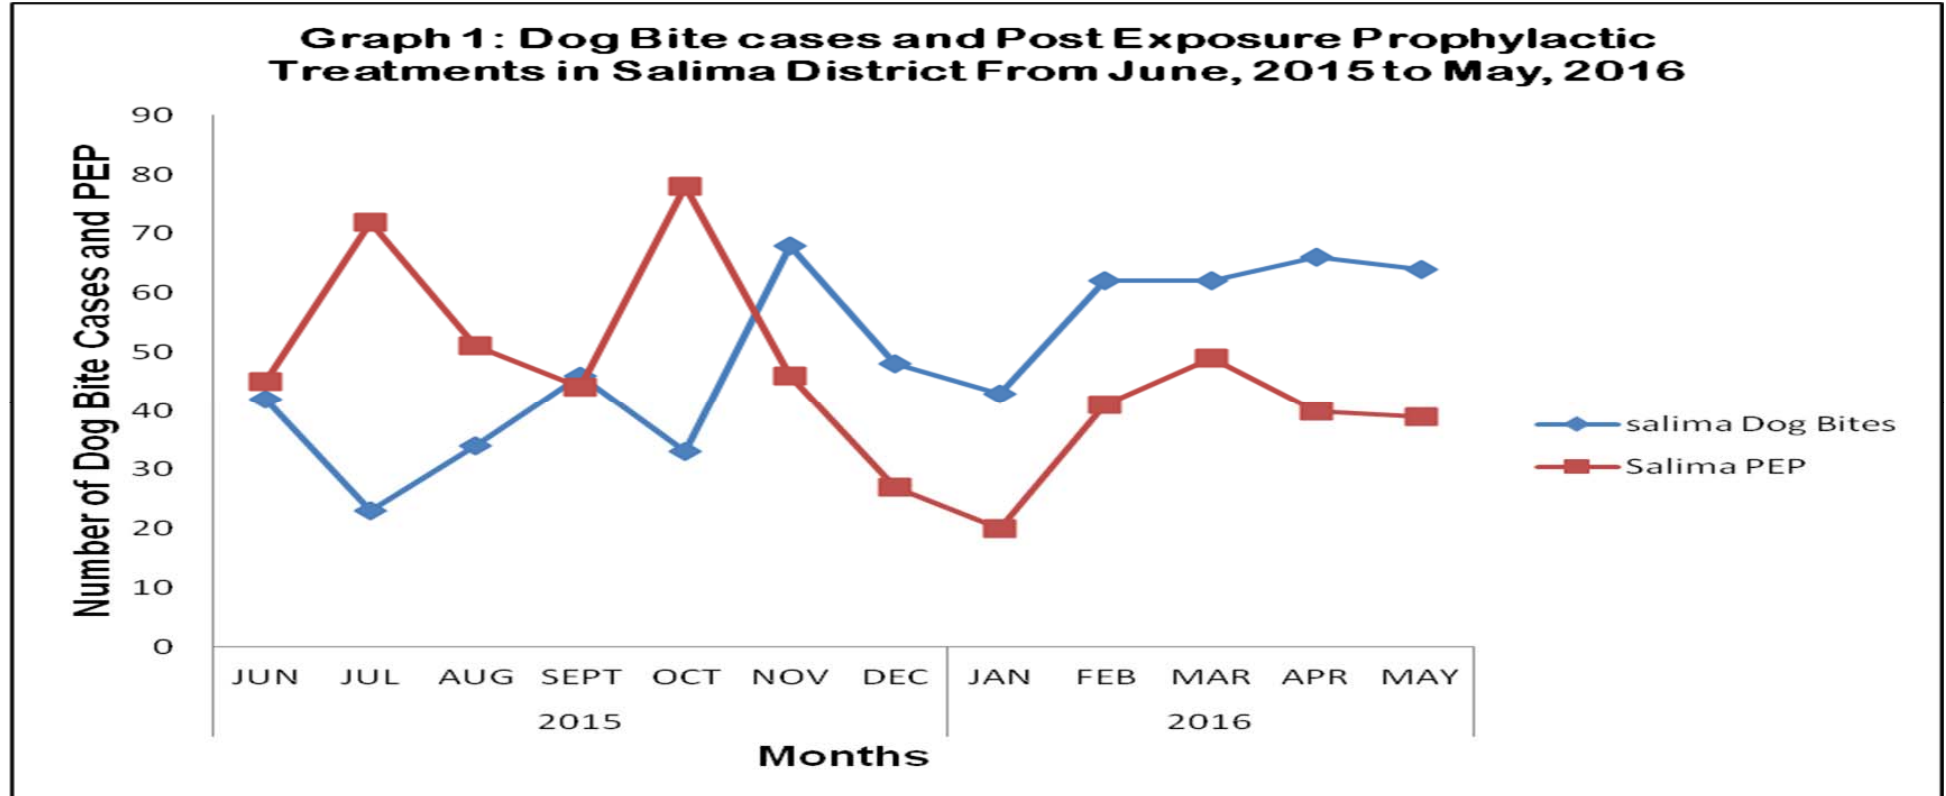

KEY	REPORTING TIMELINESS	COMPLETENESS OF REPORTING	%
	TIMELY REPORT	COMPLETE REPORTING	80% - 100%
	LATE REPORT	PARTIALLY COMPLETE REPORTING	50% - 79.9%
	NO REPORT	INCOMPLETE REPORTING	0% - 49.9%

# Results Cont'd

## 2. Comparing dog bites and PEP temporal trends

- Temporal variation of dog bites by month: mean=49 cases, SD=15.0 and PEP: mean=46 treatments, SD=16.2 (graph 1)
- Least dog bite cases in July, n=23, Lowest PEP in Jan, n=20
- Highest dog bite cases in Nov, n=88, highest PEP in Oct n=78

# Results Cont'd

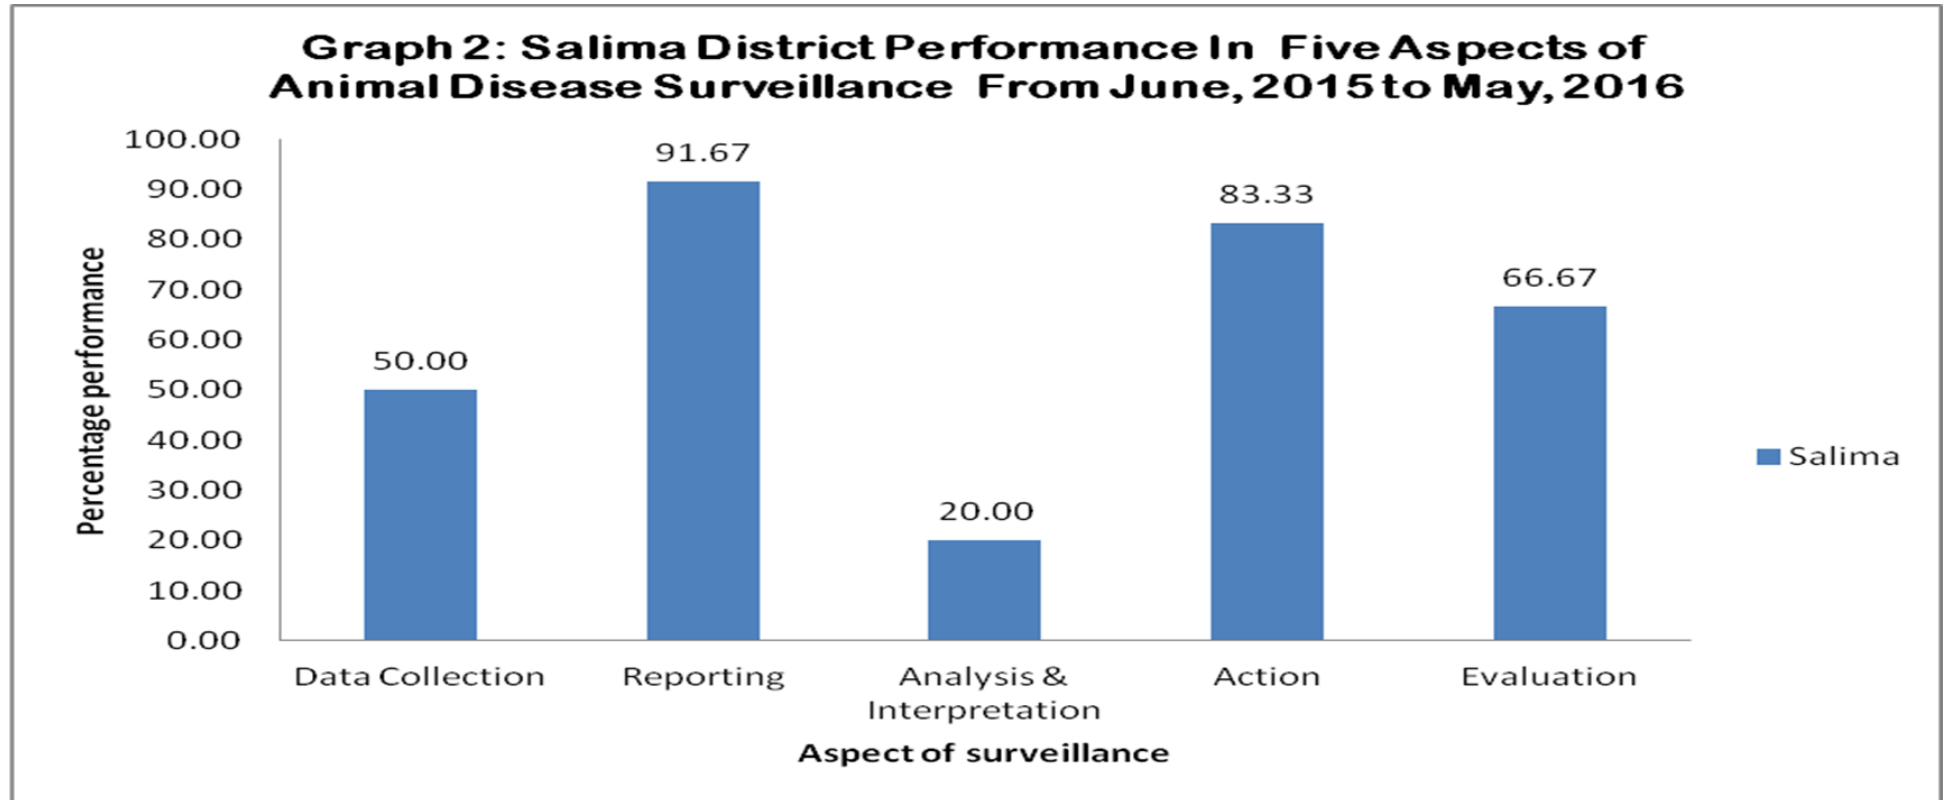

# Results Cont'd

## 3. Assessing Salima District's Performance in Rabies Surveillance

- Performance high in reporting = 91.7%; action=83.3% and evaluation=66.7% (graph 2)
- Performance low in data collection=50%; data analysis & interpretation=20.0% (graph 2)

# Results Cont'd

# Discussion

## **1. Timeliness & completeness was gd due to:**

- flexibility in reporting format (soft vs hard copies; physical vs electronic submission)

## **2. Comparing dog bite cases & PEP trends. Variations could be due to:**

- Dog bites referred for PEP by sub district veterinary officers
- Referral dog bite cases from neighboring districts
- Selling of drugs by district hospital staff

## **3. District performance in rabies surveillance:**

- the poor performance in data collection, analysis and interpretation could be due to shortage of trained veterinary personnel

# Conclusion

- Data reporting was late but largely complete
- Dog bite cases and PEP treatments showed temporal variation by month
- District performance in surveillance was good in most of the aspects of the surveillance cycle except in data collection, analysis & interpretation

# Recommendation

- Refresher training on data collection, analysis, interpretation and staff supervision might improve overall rabies surveillance performance in Salima District
